FIVE-TO NINE-FOLD INCREASE IN THE NUMBER OF CELLS ON A SLIDE¹

With the optional Cytopro® Rotor, the Aerospray Stainer becomes a superb cytocentrifuge with eight-slide capacity and programmability, at a fraction of the cost of purchasing a stand-alone cytocentrifuge.

AVAILABLE SAMPLE CHAMBERS

Patented flow control increases cell yield and delivers consistent results.

Standard Chamber

Combines ease of use with superb cell recovery.

Dual Chamber

Places two samples on the same slide for increased efficiency and economy.

Cytopro Magnum®

Accepts sample sizes up to 6 mL.

THE AEROSPRAY® PROCESS FOR HEMATOLOGY STAINING

THE STAINING STEPS

1 Smears are automatically fixed with methanol or with Aerofix® fixative (alternatively, slides can be hand-fixed using methanol or Basofix™).

2 After a drying sequence, eosin stain is applied to stain acidophilic cell components, followed by a brief period for stain penetration.

3 Thiazin dye is then applied to stain the basophilic cell components, followed by another brief stain penetration period.

4 A buffered rinse cleans the slides of excess stain and is then removed by centrifugation.

 High speed, low duration spin creates dry slides, ready for the microscope in minutes!

BENEFITS OF THE ROMANOWSKY STAIN

■ RAPID STAINING KINETICS

- Blood smears are fixed, stained, and dried in approximately 4 minutes

■ IMPROVED STAIN STABILITY

- The slow rate of decomposition of thiazin and eosin dyes, in separate neutral aqueous solutions, allows a long shelf-life

- Staining results are highly reproducible and consistent

■ CLEAR FIELDS

- With virtually no stain precipitation or debris, slides are exceptionally clean

BENEFITS OF BASOFIX

With the use of aqueous stains, basophil granules may wash away. For those who prefer granulated basophils, ELITechGroup's Basofix fixative provides:

- Stain coloration more reminiscent of alcohol-based stains
- Fixation of basophil granules
- Strengthening of primary granules
